

# Samac relentless growth

The company with seat in Vobarno, Vallesabbia valley, production motor with high technology, continues his lucky path of expansion and looks for qualified collaborators.

**Thanks to the initiatives and the technical creativity** of Commercial Engineering and Marketing and to the technical and management skills of Designers, Project Managers and Commissioning technicians, the Vobarno company is receiving a growing recognition from worldwide leaders of the Automotive sector and not only in a more and more global market (recently the company has also acquired a multi-year job order from a US company).

**After the doubling of the production area occurred at the end of 2017**, Samac is further extending the production surface adding an area of 3200 sq.m., planning the next future on solid bases of acquired multi-year projects, in the meantime operating an accurate search for talented collaborators to be integrated in its structure.

**Not only designers and mechatronic expert technicians**, but also recently graduated engineers and technicians from technical institutes are the focus of this expansion plan that can count on a continuous training in high technology paths, through the daily comparison with technical staff of leading companies in highly innovative sectors.

Electric motors, electric pumps and, in general, electrified components in the Automotive and Home automation sectors are **only some of the products** for which the Vallesabbia company is engineering and manufacturing assembly and testing lines, which are more and more characterized by Industry 4.0 features like the predictive maintenance, self-adaption of the processes, interconnection with the customer management systems, the use of the augmented reality and the management of data through cloud.

**The company has received a big drive in the last years**, also thanks to the collaboration of Mrs. Elisabetta Vaglia to the father Valentino, founder of the company.

*Creativity and technological innovation.*

*Training and continuous update.*

*Direct contact with engineers of the most important global players.*

**Do not lose the opportunity to start a path in the most fascinating job of the world.**
